Introduction

This analysis evaluates **Process (process name)** resubmissions during month1–month2 2026, focusing on identifying true rework drivers rather than raw activity repetition.

Through detailed activity-level validation, each issue was identified and accurately linked to its corresponding responsible department.

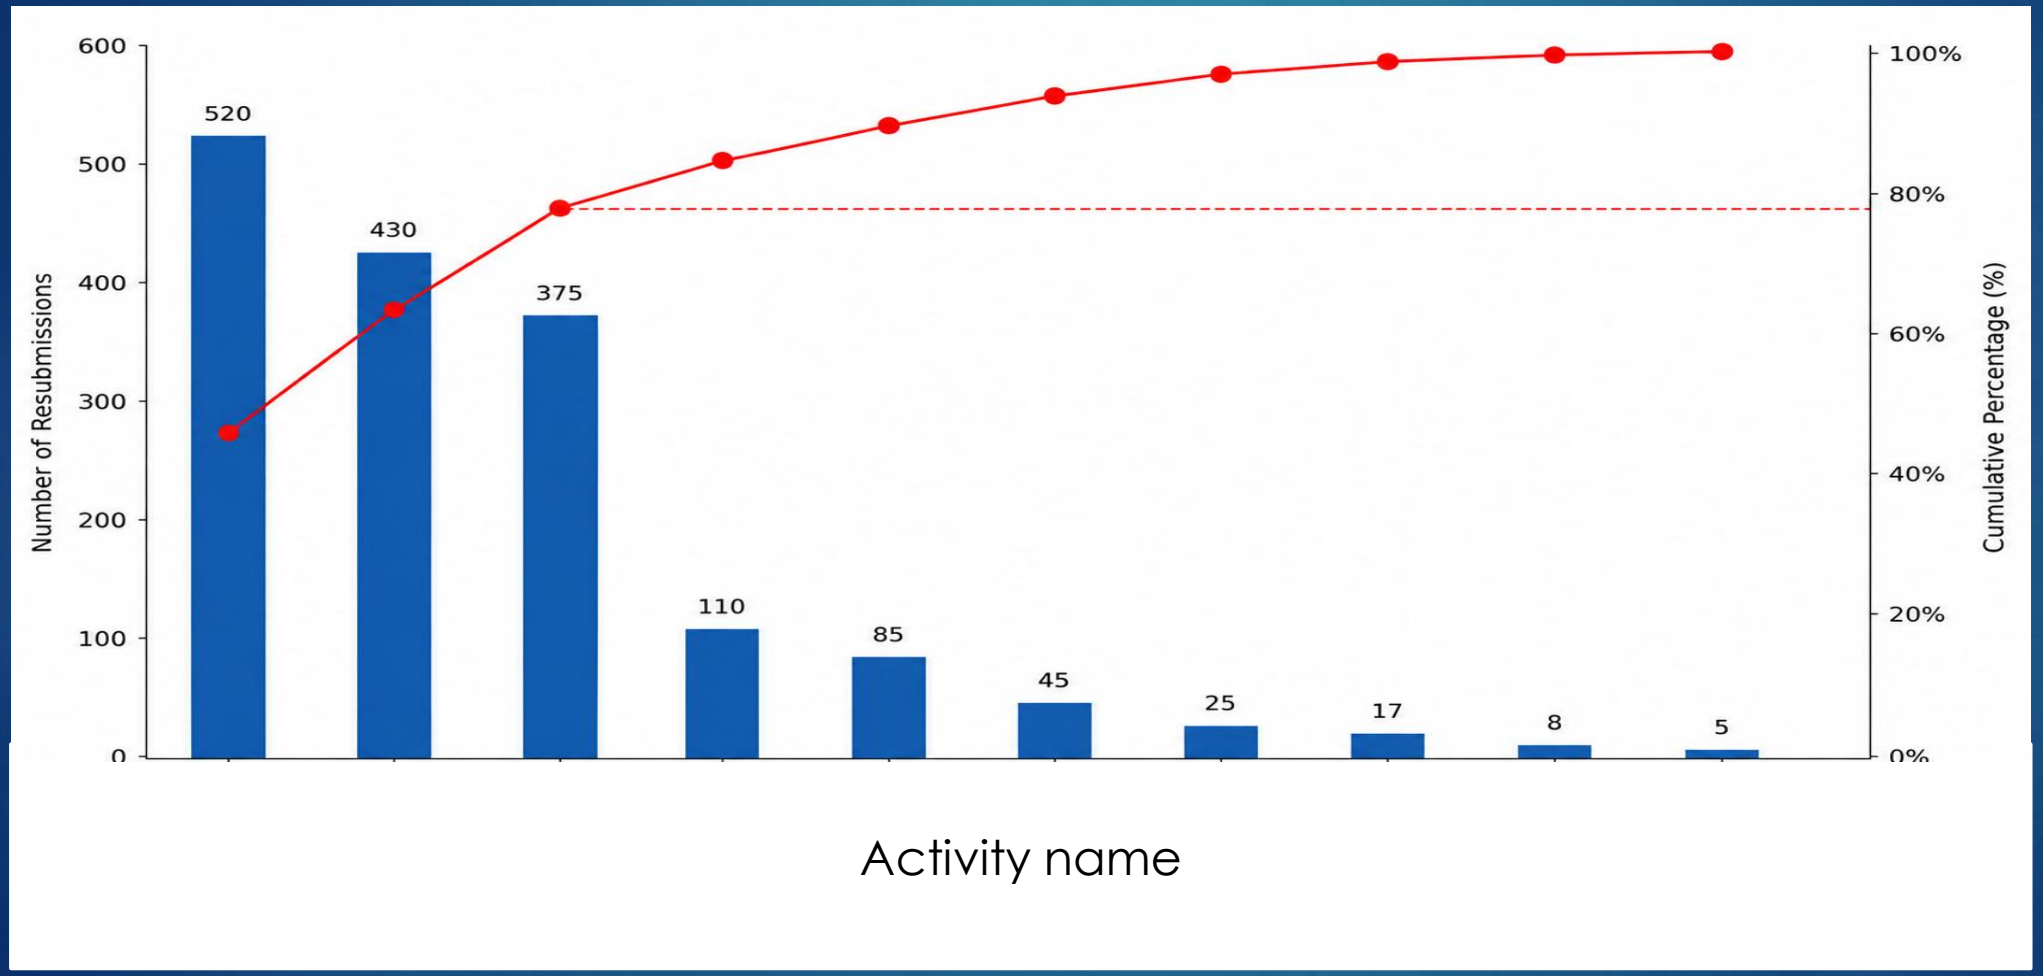

Accordingly, the study isolates actual resubmissions, highlights key root causes, and identifies responsibility concentration across departments.

The objective is to provide actionable insights to reduce rework, improve data quality, and enhance process efficiency at critical workflow stages.

This presentation has been anonymized. Company-specific names and operational details have been generalized for portfolio purposes.

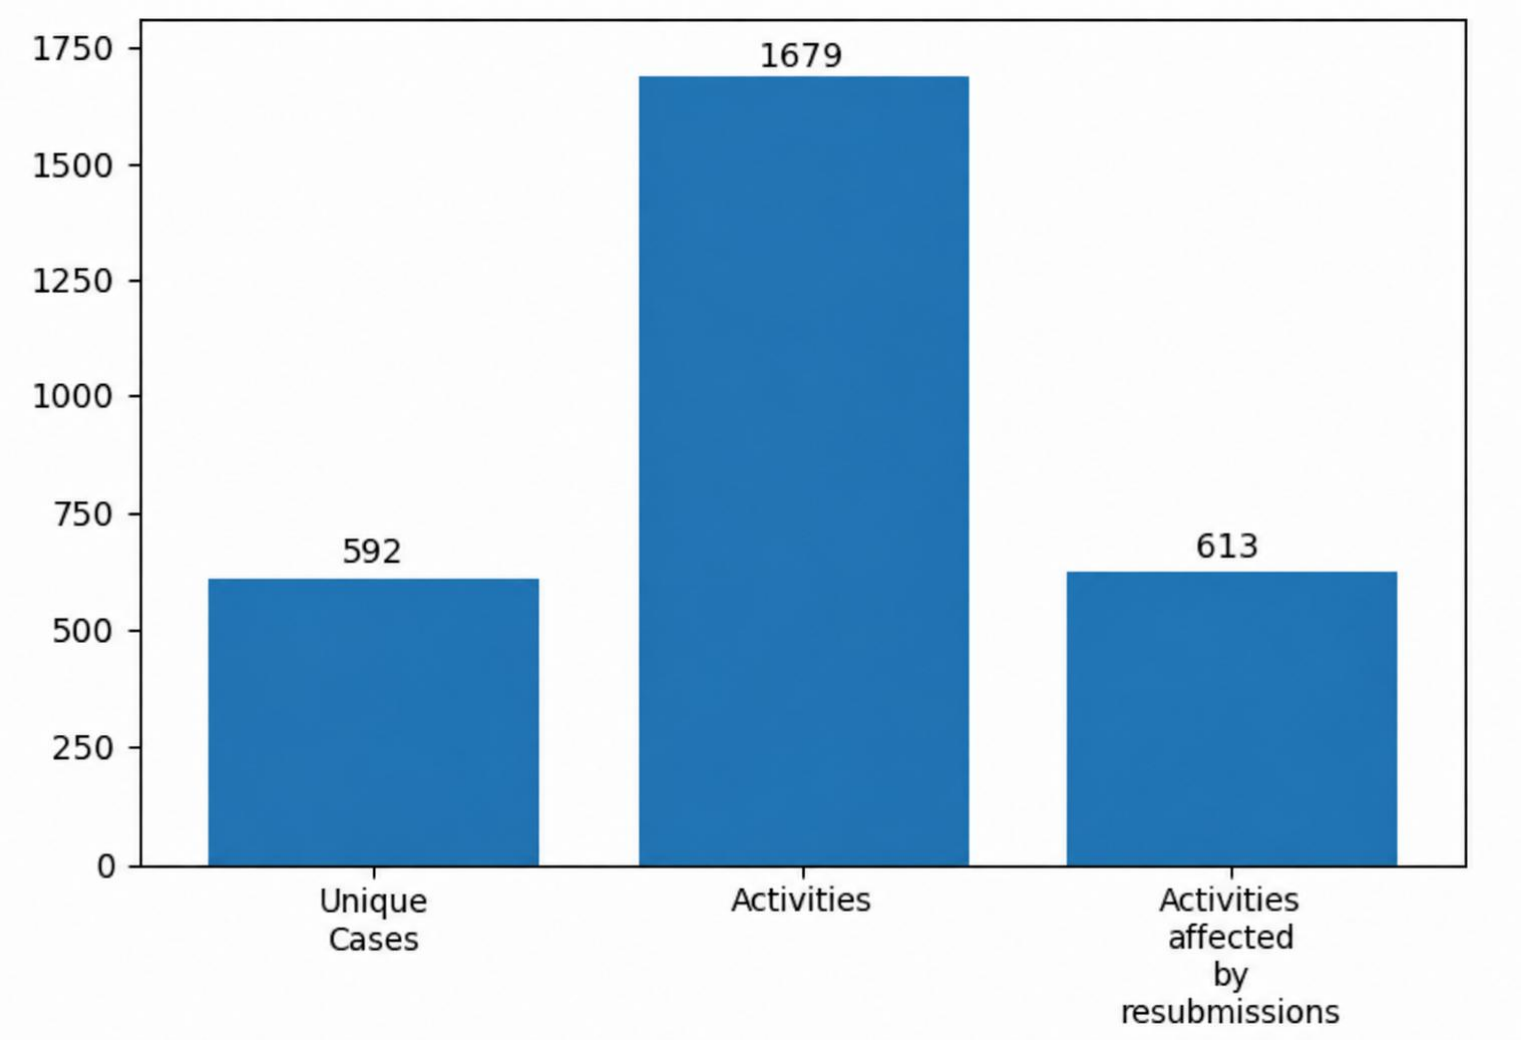

Key Drivers of Repetitions – Top Activities

Top 3 activities represent ~80% of total process volume, making them the primary focus for resubmission analysis.

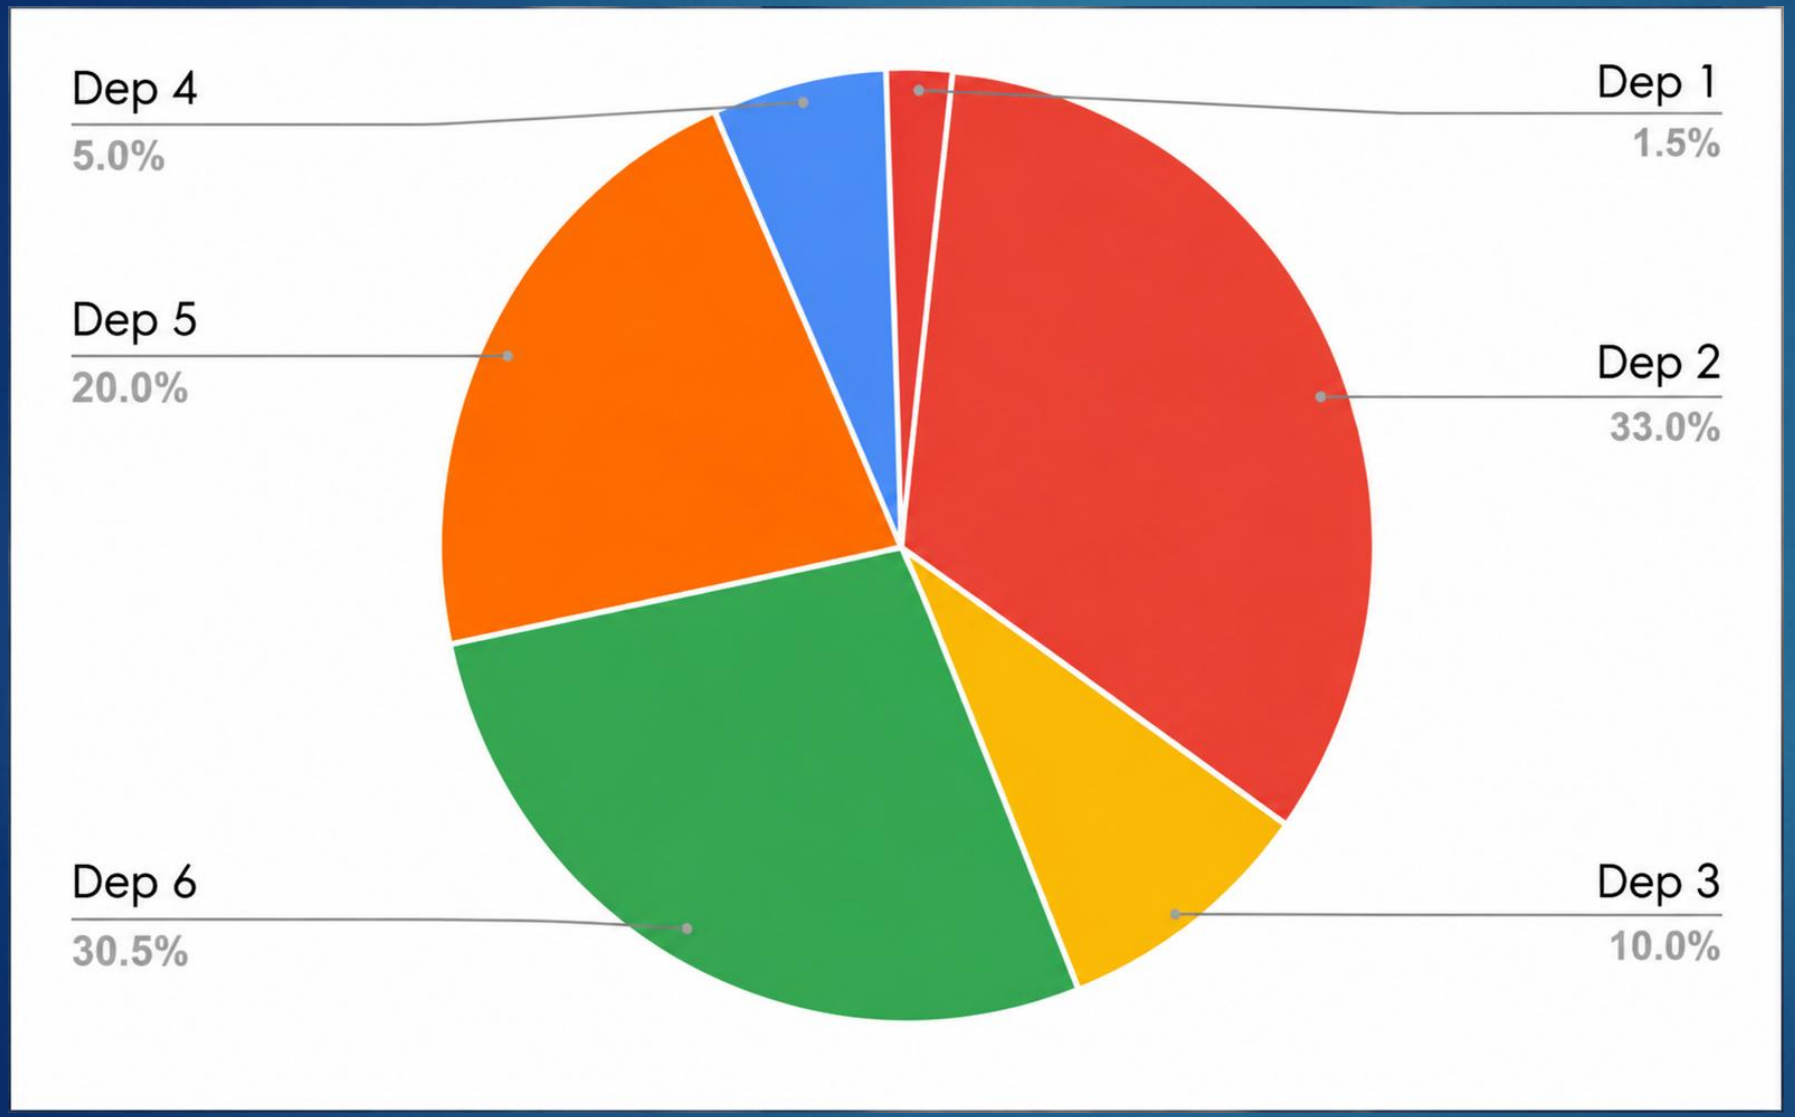

Repetition Impact Overview

Based on manual validation of the top 3 activities, 613 activities were identified as affected by resubmissions out of 1,679 total activities across 592 cases, resulting in an **activity-based resubmission rate of ~36%.**

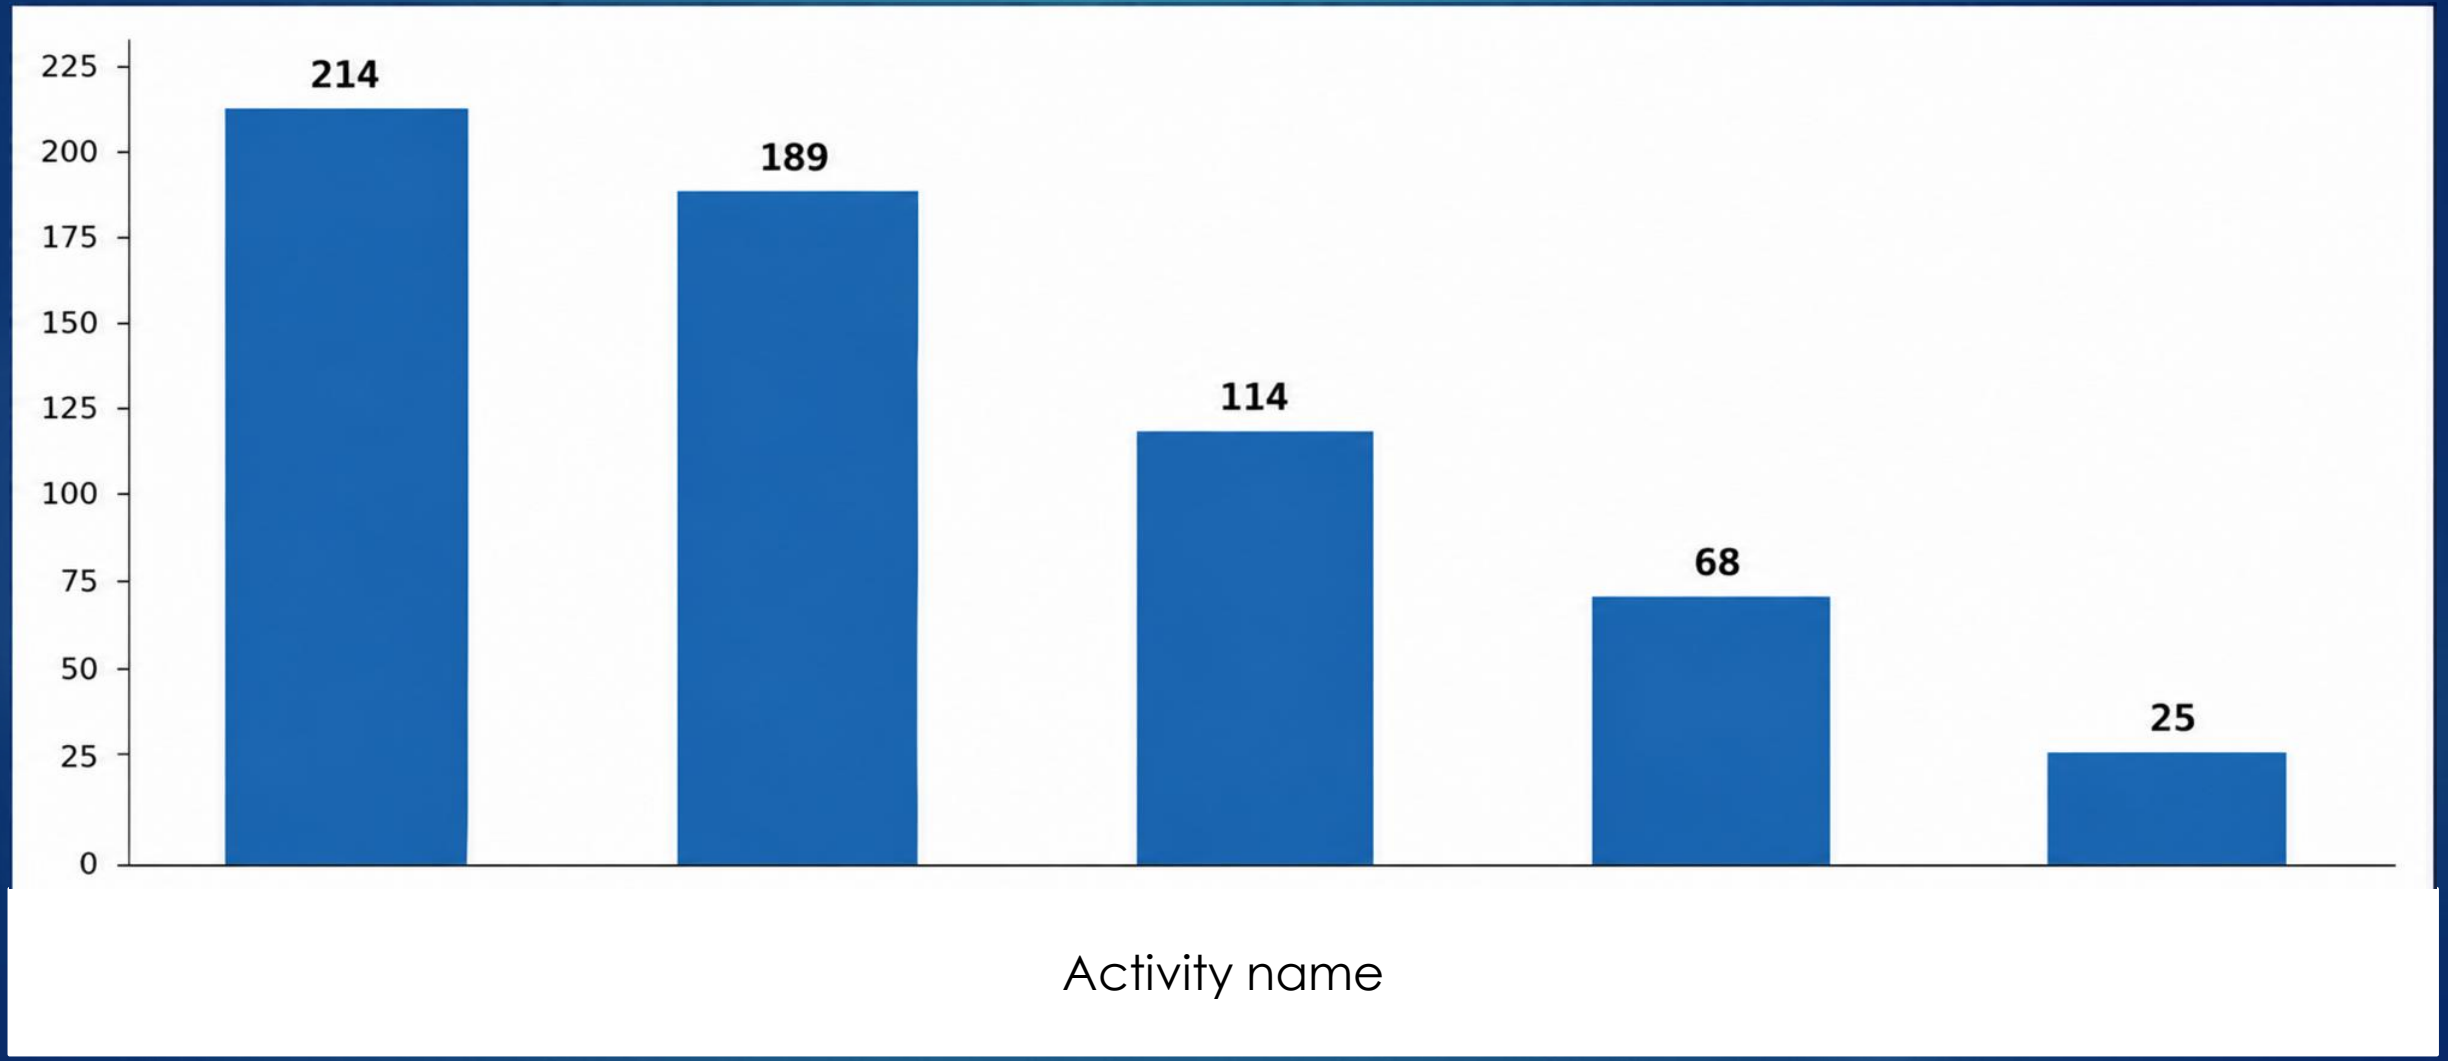

Resubmissions by Responsible Department

Resubmissions are primarily concentrated within **Dep2 (33%)** and **Dep 6 (30.5%)** teams.

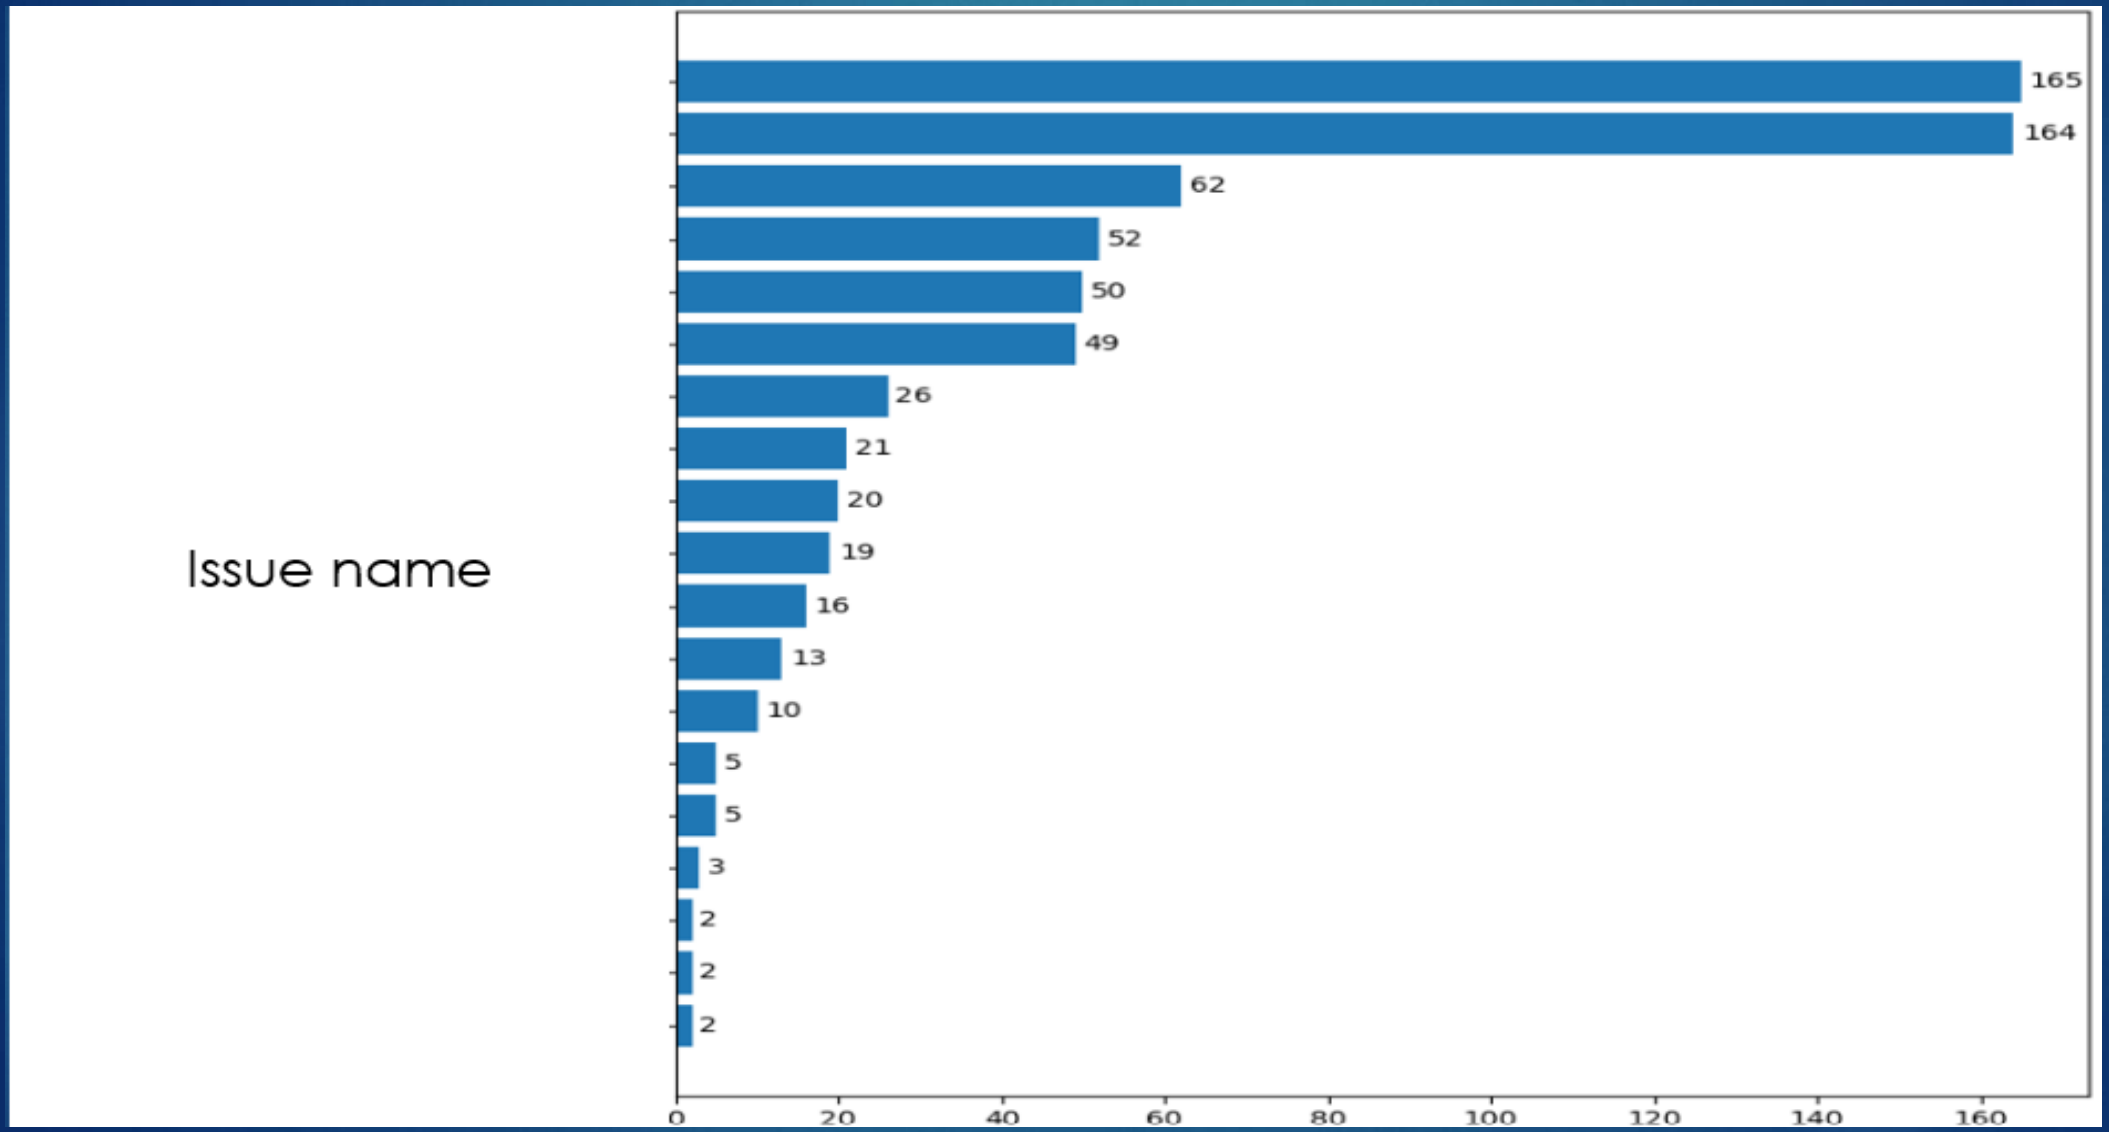

Resubmissions by Activity

The most impacted activities are Activity A and Activity B, as they show the highest repetition driven by resubmissions

Resubmissions by Reasons

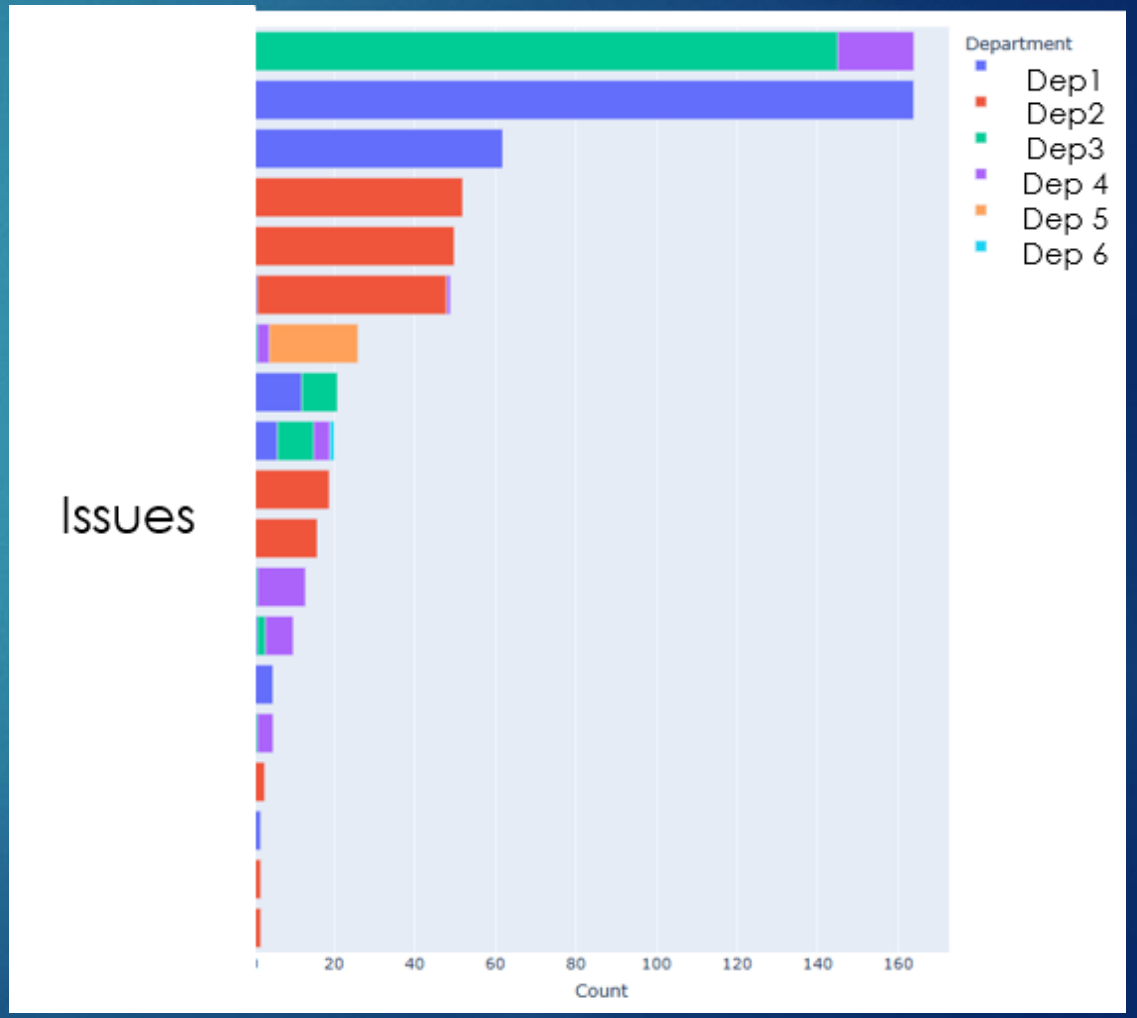

Most resubmissions are driven by documentation issues (issue 1& issue 2), highlighting data quality as the primary root cause.

Reasons of Resubmissions and Department Responsibility Analysis

Responsible Department	Issue	Count of Issue
Dep name		1
	A	164
	B	62
	C	1
	D	6
	E	11
	F	5
Dep name		251
	A	4
	B	19
	C	7
	D	3
	E	4
	F	12
Dep name		49
	A	52

	E	9
	F	9
		1
Dep name		168
	A	22
Grand Total		682

Most resubmissions come from Issue 1 and Issue 2, and mainly fall under the responsibility of the Dep 1 and Dep 2.

Recommendations

1. Targeted Training & Data Accuracy Enforcement
Conduct focused training sessions for Dep 2 and Dep 6 teams to ensure accurate and complete data entry.
All Exceptions must be properly documented and supported with approved references before initiating any case.

2. Workflow Standardization
Standardize workflows and define clear guidelines across all teams, led by each team's senior or expert, ensuring that all team members follow the same steps before case creation, resulting in complete, accurate, and consistent data.

3. Pre-Submission Quality Control (Temporary Phase)
Implement a temporary validation step where all requests are reviewed by a team senior or expert before system submission to ensure completeness and correctness, thereby minimizing errors and reducing resubmissions.
